

Sampling Bag

SAMPLING BAG FOR GASEOUS EMISSIONS AND ODOURS

Consumaj inc. is proud to offer to its numerous customers the Onose-8® line of products, dedicated to olfactometry and gaseous emissions sampling. This line of products includes the Onose-8® sampling bag, an ideal tool for gaseous contaminants and odour sampling.

PRESENTATION

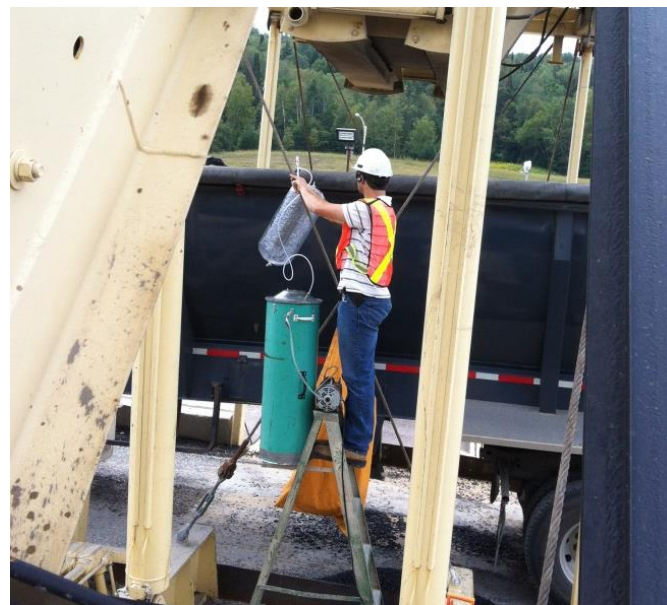

The Onose-8® sampling bags are especially developed to be used for the sampling of various gaseous compounds and odours. Manufactured with inert material made of Teflon® or Nalophan®, these bags are resistant, do not react with the gaseous chemical compounds and may be used in a wide variety of gas sampling projects .

APPLICATIONS

The Onose-8® sampling bags are build by our experienced technicians. Our leak-free sampling bags are available in various sizes, volumes and materials. Special orders are also accepted. These sampling bags are especially designed to be used in harsh working environments while preserving the integrity of the gas samples. The Onose-8® sampling bags are mechanically sealed and can be filled or emptied with different valves or adaptors. Easy to use, these bags meet all standards regulating the sampling procedures of contaminants and odours.

OPERATION

The Onose-8® sampling bags can be connected to any ¼" (10mm) outside diameter tubing or with a double shut off quick disconnect valve or septum. These sampling bags are compatible with the Onose-8® vacuum chamber and also with all other Onose-8® line of products. These sampling bags ensure the integrity of the odorous samples for a minimal period of 24 hours.

Onose-8® is a trademark of:

experts conseils
CONSUMAJ

Consumaj Inc. has for mandate to provide to its numerous customers the best specialized products in the field of olfactometry and gaseous contaminant sampling. Visit our website or contact us for more information or for a complete list of products and services provided by Onose-8® and Consumaj Inc.

BENEFITS

The Onose-8® sampling bags are mechanically sealed, rather than thermally sealed. This is one of the main advantage that differentiate the Onose-8® sampling bags made by Consumaj Inc. to many other types of sampling bags. The Onose-8® sampling bags are free of residual odours. The sampling bags are provided in several dimensions and volumes , thus they can be used in all possible types of sampling procedures and methods.

TECHNICAL INFORMATION

Instrument	Onose-8® Sampling Bag
Product number	CMJ-SE-300NA-60-10 CMJ-SE-200TF-28-10
Manufacturer	Consumaj Inc.
Diameter	300 mm (12 in.) (CMJ-SE-300NA-60-10) 200 mm (8 in.) (CMJ-SE-200TF-28-10)
Length*	0,85 m (33,5 in.)
Volume*	60 liters (2 ft ³) (CMJ-SE-300NA-60-10) 28 liters (1 ft ³) (CMJ-SE-200TF-28-10)
Materials	Nalophan® (12 po.) (CMJ-SE-300NA-60-10) Teflon® (8 in.) (CMJ-SE-200TF-28-10)

* Special orders accepted

In addition to its Onose-8® line of products, Consumaj Inc. also provides professional services in the field of gaseous emissions and odour management .
